PROJECTS

Tailwinds Flight School Management — Detail

I have developed a web dashboard named "Tailwinds Flight School Management" for a flight school dedicated to teaching aviation enthusiasts how to pilot aircraft. This comprehensive project facilitates users in reserving their classes, while instructors can access information about their reservations, past flights, and transactions. The dashboard also offers detailed insights into the available aircraft fleet and enables users to conveniently schedule their reservations. Moreover, the platform encompasses a range of courses designed to enrich students' knowledge about different aspects of aviation and aircraft.

Tools & technologies

- HTML
- SCSS
- BootStrap
- JavaScript

Role & Responsibility

My role involves to develops fully web dashboard frontend structure and enhance it.

Jobsite Sentry — Detail

Job-site is an advanced monitoring system. It utilizes advanced AI technology in cameras to ensure the highest level of security and surveillance on job sites. It helps the user to monitor the movement instead of watching live streaming every time. If any movement is caught by the job-site advanced AI technology, it generates an alert to the monitoring team. So, they can watch the alert and check the priority of the alert whether it is threaded or not.

Tools & technologies

- HTML
- SCSS
- BootStrap
- ReactJS

Role & Responsibility

I worked on handling both the UI and front-end side.

Gold Leash K9 — Detail

I worked on a website named "Gold Leash K9," formerly known as "My Buddy

LANGUAGES

- English - Fluent
- Urdu -Hindko - Punjabi

Place." This platform serves as a hub where users can discover canine companions and receive professional training services for their beloved pets. In essence, Gold Leash K9 provides a comprehensive repository of essential information about dogs, offering users the opportunity to not only find suitable canine partners but also to effectively train their own dogs.

Tools & technologies

- HTML
- SCSS
- BootStrap

Role & Responsibility

My role involves develops some new front end pages of web application and enhance old pages.

This Car — *Detail*

I have designed a project for a car website that allows users to search for their desired car based on their specific requirements. Users can easily search for a car by model or make, body type, and price range. Additionally, if the user is unsure about what they are looking for, they can consult a personal free shopper who can help them choose the best car for their needs.

To make it easier for users to browse through the car catalog, I have implemented a slider using Swiper. This slider will display all the car catalogs to the user in an organized and user-friendly way.

Tools & technologies

- HTML
- SCSS
- BootStrap
- ReactJS
- SwiperJS
- SlickSlider

Role & Responsibility

My role involves develops all front end pages of web application.
